

## No chance for moisture

### Fabric development

*schoeller®-dryskin* was developed specially for top athletes. In addition to lightness, low pack volume, durability and good freedom of movement, optimum moisture transport has moved to the top of the list of requirements. In order to support the performance of athletes, fabrics today must absorb as little moisture as possible. Only in this way is it possible to avoid the cooling-down due to evaporation which results in rapid energy depletion. By using special four-chamber fibres, Schoeller® has come up with a decisive new development: the new four-chamber fibre increases the evaporation surface and speeds up the drying process to just a fraction of its original time. Due to its sophisticated combination of fabrics, sports clothing made of *schoeller®-dryskin* guarantees a pleasant body climate even after hours of the greatest physical effort.

### Areas of use

Ski tours		Mountain-eering
	Cycling	
Trekking		Cross-country skiing

*schoeller®-dryskin* is used for those types of sport which are particularly strenuous and movement-intensive:

- Mountaineering
- Cross-country skiing
- Cycling
- Ski tours
- Trekking

Uses:

- Pants
- Jackets

#### Extreme application

Unusual conditions demand extreme functionality. *schoeller®-dryskin* fabrics are therefore also available with "extreme" qualities: they are further characterised by a very high level of rubbing fastness achieved by using a special Cordura® fibre.

### Characteristics

The fabric is particularly characterised by the following features:

- Low level of moisture absorbency
- Rapid transport of moisture
- Permanently elastic
- Rub fast
- Hard-wearing
- Low weight
- Low packing volume
- Easy care

Finish:

Impregnated, water and dirt resistant.

Fabric components:

Cordura®, Lycra®, Coolmax®, polyamide, polyester.

Environment label:

Eco Tex Standard 100

#### Brief description

*schoeller®-dryskin* keeps the skin dry for hours and, in addition, is highly elastic.

Registered Trademarks:

Cordura®, Lycra®, Coolmax®: Dupont
